DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 6 and 8-14 rejected under 35 U.S.C. 103(a) as being unpatentable over Higashitani et al. (US 5,637,528).

Higashitani discloses the steps of:

For claims 6 and 8:

oxidizing the silicon substrate locally at a first temperature of at least above 1100 degrees centigrade through the patterned silicon nitride mask layer to form silicon oxide dielectric field oxide (FOX) isolation layers (col. 5, Ins. 5-10).

oxidizing the silicon substrate further at a second temperature no greater than 1100 degrees centigrade (col. 1, ln. 60 – col.2, ln. 6).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made that the range of temperatures disclosed by Higashitani, for each oxidizing step, encompasses the ranges of temperature claimed by the applicant. In the case where the claimed ranges “overlap or lie inside ranges disclosed by the prior art” a prima facie case of obviousness exists. In re Wertheim, 541 F.2d 257, 191 USPQ 90 (CCPA 1976); In re Woodruff, 919 F.2d 1575, 16 USPQ2d 1934 (Fed. Cir. 1990).

The examiner takes official notice that the limitations of claims 3, 5 and 9-10, substrate materials, dry environment conditions and crystal orientations, are conventional in semiconductor processing of today.

Response to Arguments

2. Applicant's arguments filed 2-14-03, pertaining to claims 6 and 8-14, have been fully considered but they are not persuasive. The applicant argues that Higashitani does not disclose a first oxidation at least above 1100 degrees and followed by a second oxidation no greater than 1100 degrees. However in the abstract Higashitani states that the first and second oxidizing steps are preferably performed at temperatures between 950 and 1200 degrees. Therefore because the temperature ranges, of applicant's claims, are broad the Higashitani temperature range reads on the claimed limitations. The examiner is reading the Higashitani reference as saying the second oxidation can be at a temperature of 950 degrees. Applicant's broad range for both oxidizing stages is so broad that the examiner feels that Higashitani reads on the claims.

Also, applicant did not argue the official notice, which was maintained in this rejection, given in the previous rejection therefore the examiner takes that as an agreement that the rejections were valid.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2812

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
